There have been a few changes to the Heatstar Vent Free heater line over the past few years, including two different versions of a blower that is only compatible with certain models. The main difference in the blower being the shape of the opening on the back as depicted below. Compatibility is dictated by the body type of the heater.

To help clarify any questions, here is a breakdown of Heatstar Vent Free heaters and what blower model with which they are compatible with examples of the vent free body shape. If you have any additional questions, please contact Technical Service.

This does not apply to 10,000 BTU units. Blowers are only utilized with 20,000 – 30,000 BTU units
It does apply to both radiant and blue flame models of either propane or natural gas.

Current 20,000 BTU Model

Current 30,000 BTU Model

F299201 – Triangular

Older 20,000 BTU Model

Older 30,000 BTU Model

F299200 – Cylindrical
